

Pavo MuscleBuild

Supports rapid build-up of muscles

Are you training a young horse and the muscle development lags behind? Or you do have a competition horse and you want to build up more muscle mass? A horse can never develop *more* muscles because the quantity is genetically determined. However, muscles can be trained to become thicker. Through training, the muscle cells are activated to store more energy which allows improvement of the performance. Extra nutrients can support this process.

Muscle build-up for your horse

Pavo MuscleBuild contains whey powder, a substance well known in the bodybuilders' community. Whey powder contains a number of amino acids that are vital for muscle build-up. Amino acids are protein chains that function as building blocks for the muscles. Vitamin D3 helps to prevent muscle fatigue, while L-carnitine is added to improve the energy conversion in the muscle cells. Additionally, Pavo MuscleBuild contains the natural CellProtect antioxidants for neutralizing the free radicals. This product does not contain wheat, so it is gluten-free. Moreover, Pavo MuscleBuild is also doping-free.

Available in a convenient 3 kg bucket.

Important characteristics

- Supports rapid muscle development
- Contains essential amino acids for muscle build-up and carnitine
- Helps to prevent muscle fatigue

Application

- For horses that need support for muscle build-up
- For young horses that have just started their training
- For competition horses after a period of rest

Feeding advice

In order to make your horse more muscular, it is not sufficient to only provide Pavo MuscleBuild: you will need to train your horse to stimulate muscle growth. In addition, the total diet should contain sufficient proteins, otherwise the horse will not have sufficient building blocks for the development of muscles. Combined with a high-quality roughage and proper training, in three months' time, you can significantly increase the muscle mass of your horse by giving Pavo MuscleBuild.

- Horse (approx. 600 kg): 100 grams per day
- Pony (approx. 300 kg): 50 grams per day

Pavo MuscleBuild

Supports rapid build-up of muscles

Product Specifications

Contains

Lucerne (alfalfa)
Whey powder
Rye middlings
Toasted soybean flakes
Calcium carbonate
Linseedoil
Citrus pulp
Dextrose

Package

Bucket 3 kg

Storage advise

Store in a cool, dry and dark place.
Reclose after usage

Guaranteed analysis

Energy (DE) 5,2 MJ/kg
Energy (EWpa) 0,42 EWpa
Energy (ME) 4,4 MJ/kg
